LIGHTING HARDWARE SETUP EQUIPMENT DAMAGE

WARNING

During the setup of your lighting hardware, it is critical to ensure that you **DO NOT** cross-wire between silver, green-stickered network ports and black, blue-stickered network ports.

Green-stickered ports **CAN ONLY** wire to other green-stickered ports.

Blue-stickered ports **CAN ONLY** wire to other blue-stickered ports.

Failure to do so **WILL** result in damage to the network ports and void the warranty included with your CORE Show Player product.

1. Attach Feet to Stand

Line up the holes on the included metal feet with the open holes on the base of the metal strut, then use an allen wrench to attach the feet with the included bolts.

2. Attach Controller Boxes

Attach the included controller boxes to the back of your product with the installed mounting bracket.

3. Plug Lights into Controller

Match the numbers on the power cords coming from the back of your face with the numbers on the power cords coming from your controller. Channel 3 is unused, and some characters have no Channel 2. Skip these.

Note: If you are using more than one Singing Character, you will connect plugs 9-16 to plugs 1-8 on Singing Characters 2 & 4 respectively.

4. Connect Network Cable(s)

Connect a network cable from the black adapter (blue sticker) mounted to the side wall in your CORE Show Player to an open black port (blue sticker) in your LOR 16-channel controller.

Note: if you are running more than two Singing Characters, you will need to connect an additional network cable from the remaining open port on the 16-channel LOR controller to one of the open ports on your second 16-channel LOR controller.

5. Connect Audio

Connect an 1/8" audio plug from the headphone output on the white USB audio adapter inside the CORE Show Player to your audio playback device.

6. Plug All Devices In

Plug in the power cords from your LOR controller(s) - there will be two per controller - into an adequately rated outlet or extension cable. Secondly, attach the power to your CORE Show Player.

Wait roughly 90 seconds for your device to initialize. It will start automatically after the 90 second delay.
